EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Christopher J. Rourk on March 10, 2005.

The application has been amended as follows:

The claims are amended as followed:

Claim 11 (Amended). A communications driver on a communications card comprising:

a network driver interface; and

a miniport driver coupled to the network driver interface, the miniport driver comprising:

a system interface abstraction layer (SIAL) comprising:

an operating system (OS) interface to process a plurality of messages for a plurality of internal driver entities; and

a message controller coupled to the OS interface to transfer the plurality of messages.

2. The following is an examiner's statement of reasons for allowance: The claims are allowable for at least the following reasons: The cited claims detail a system interface abstraction layer comprising the cited operating system interface and the cited message controller within the miniport driver of a communications driver. The specification states that a miniport drivers are well known and understood by those skilled in the art (specification, pg. 11-13). Microsoft's Computer Dictionary, Fourth Edition, defines a miniport drivers as drivers containing device-specific information that communicate with non-device specific port drivers, which in turn communicate with the system. Therefore, the claims detailed these defined miniport drivers containing a system interface abstraction layer, i.e an abstraction function set, of operating system interface functions and message controller functions as disclosed in the claims. The prior art of record at best teaches the communication, translation, and execution of data packets with functions in a driver such that incompatible drivers can communicate through a standardized system. In particular the cited prior art uses a NDIS architecture for standardizing communication of data and the invocation of functions between incompatible drivers, i.e. native protocol drivers. The system does not detail the cited system interface abstraction layer within a well known miniport driver that is within a communications driver of a communications card as detailed in the claims. Therefore, the cited claims are allowable over the cited prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lewis A. Bullock, Jr. whose telephone number is (571) 272-3759. The examiner can normally be reached on Monday-Friday, 8:30 am - 5:00 pm.
